

# *Plant Invaders of Mid-Atlantic Natural Areas, 6<sup>th</sup> Edition*

Orders Due Friday August 13, 2021

As the climate warms, global commerce expands, and habitat destruction continues, so does the threat of invasive species. This book is for people who want to learn about invasive plants, how to identify them, and what can be done to control them. The 6<sup>th</sup> edition of **Plant Invaders of Mid-Atlantic Natural Areas** provides information on over eighty invasive species threatening our region, including Japanese jumpseed and a new species of water chestnut, plus lots of new photos.

Ready to dive deeper into the growing invasive species problem? The book's resources section has been completely revamped and is geared for experts as well as those new to the field. These pages provide a comprehensive selection of publications and websites with key data on the plants you love to hate! An updated Native Plants for Landscapes section offers an ecoregion map and practical suggestions for native species appropriate for your area.

For this new edition, principal author and invasive species specialist Jil Swearingen of *In the Weeds Consulting* teamed up with

co-author and plant expert Judy Fulton of *EcoPlant Consulting*. Dr. Melanie Schori, Botanist for the USDA Agricultural Research Agency's Germplasm Resources Information Network, provided assistance with updates on plant names.

Books are available for purchase by the box (50/book). The estimated price per book is \$6, but the final price may change based on the total quantity ordered. To place your order, complete the online form by **August 13, 2021**. (In your browser, enter [forms.gle/xLUo9Ph5jPB5ubAY8](https://forms.gle/xLUo9Ph5jPB5ubAY8)).
